

HW3 README

白宗民 B09602017

I use Matlab to write this HW.

If you want to execute. Just need to open the .m file in MATLAB and go to the editor to press the “Run” button.

Notice:

I do the regular and bonus this time. And they are separated in the folder.

If you want to check the **normal** one, open the `b09602017_hw3.m`

If you want to check the **bonus** one, open the `b09602017_hw3_bonus.m`

Thanks for the patient of opening two files. Since I realize that if we do the bonus then we don't need to do the regular one after I finish the regular one, I create the two files. Sorry for the inconvenience.
